

# Applications guides | Finger Print Key Lock for the acoustic components

It is used to emit a signal sound when door unlock or button is pressed.

A fingerprint key lock is an electronic device used to capture a digital image of the fingerprint pattern. The captured image is called a live scan. This live scan is digitally processed to create a biometric template (a collection of extracted features) which is stored and used for matching. This is an overview of some of the more commonly used fingerprint sensor technologies..
